

At total of 1.53million tonnes at 1.8%TCu is currently know and has been fully evaluated. Mining will commence once the EIA has been approved.

6.0 EXPLORATION PROGRAM

Ruida Investment Limited initiated geological exploration on the eastern side of the old open pit at Jifumpa mine covered by the extended area of the mining license (appendix 3).

As a result of this new exploration, an addition of 1.533 million tonnes of copper ore reserves was discovered and added to the resource base. Plans are under way to exploit this resource by open pit mining method once the EIA has been approved by ZEMA. Improved confidence level exploration is on-going. From the current information, a numerical block modelling was generated as given in Figure 7 below
